MEMORANDUM

To: All affected City Staff and Design Consultants
From: Jeff H. Edmonds, P.E., Director of Engineering Services
Date: November 14, 2016
Subject: Revisions to City Wastewater Standard Details and Spec 025205

Updates to the following City Standard Construction Specifications and Details are now issued and posted to the Engineering Services website:

1. Wastewater Standard Details, Sheets 1-4 (11-9-2016)
   - Added note on Sheet 4 regarding requirements for street cut permit per City Ordinance 030040 to the detail for Trench Backfill for Wastewater Lines and Pavement Repair for Utilities.
   - Revised sheet title blocks for consistency with other City Standard Detail sheets.

2. 025205 Pavement Repair, Curb, Gutter, Sidewalk and Driveway Replacement (11-9-2016)
   - Added paragraph to Item 5 regarding City Ordinance 030040, Article III Cuts and Excavations.

The revised Specification and Detail Sheets may be downloaded from the Engineering Services website at the following locations:

http://engineercct.com/standard-details
http://engineercct.com/standard-specifications

Please make sure that the most current versions of the City Standards are included in applicable City projects. We invite and appreciate your input and suggestions for future updates to the City Standard Specifications and Details.

GENERAL WASTEWATER CONSTRUCTION NOTES:
The contractor shall use the size of the work and ensure local codes and standards are followed. The contractor shall be responsible for all construction and must comply with the specifications and standards set forth in this document. The contractor shall be responsible for all construction work and must comply with the specifications and standards set forth in this document. The contractor shall be responsible for all construction work and must comply with the specifications and standards set forth in this document.
TRENCH BACKFILL FOR WASTEWATER LINES
AND PAVEMENT REPAIR FOR UTILITIES

GENERAL NOTES FOR BACKFILL

CASING NOTES:

- CASING SIZE: 12" TO 36" Casing Detail
- CASING DETAIL: 4" TO 10" Casing Detail

*TRENCH BACKFILL FOR WASTEWATER LINES AND PAVEMENT REPAIR FOR UTILITIES*
1. DESCRIPTION

This specification shall govern the removal and replacing of all types of pavements and surfacing required to complete the project.

2. MATERIALS

Unless otherwise specified on the drawings, materials and proportions used along with this specification shall conform to the respective following specifications:

- **City Standard Specifications**
  - Section 022020 “Excavation and Backfill for Utilities”
  - Section 022100 “Select Material”
  - Section 025223 “Crushed Limestone Flexible Base”
  - Section 025424 "Hot Mix Asphalitic Concrete Pavement"
  - Section 025610 "Concrete Curb and Gutter"
  - Section 025612 "Concrete Sidewalks and Driveways"
  - Section 025620 “Portland Cement Concrete Pavement”
  - Section 030020 "Portland Cement Concrete", Class "A" Concrete
  - Section 032020 "Reinforcing Steel"
  - Section 038000 "Concrete Structures".

3. METHOD OF CUTTING

The outline of the trench shall be marked upon the surface of the pavement to be cut, and all cuts into the pavement shall be saw-cut as nearly vertical as it is possible to make them. All unwanted materials removed shall be disposed of by the Contractor and shall not be used as backfill material.

4. BACKFILL OF TRENCH

Excavation and backfilling of trench shall be in accordance with City Standard Specification Section 022020 “Excavation and Backfill for Utilities.”
5. REPLACING STREET AND OTHER PAVEMENT

All pavements, driveways, sidewalks, and curbs and gutters which are cut shall be replaced in a workmanlike manner, with like or better materials or per pavement repair details to be provided on the drawings.

Pavement cuts in a street for any utility requires a permit from the Director of Development Services in accordance with City Ordinance 030040, Article III Cuts and Excavations (12-17-2013). The installation of a utility that crosses the ROW at a perpendicular or near perpendicular angle and has an OD of 6” or less will not be permitted to be installed by cutting the road section. Street excavation/cut for a utility in an asphalt roadway shall include a full lane overlay or pavement repair for parallel cuts, or a 12’ wide pavement repair for perpendicular cuts. Street excavation/cut for a utility in a concrete roadway shall include full panel replacement. The drawings and/or permit application should include a site specific pavement cut and restoration plan that indicates the general nature of the pavement and roadway (for examples, concrete arterial, asphalt residential) to be cut and restored, the existing pavement section (if known), the location and approximate area of the excavation/pavement repair, including the approximate length and width of the pavement repair in relation to the roadway travel lane(s).

6. REPLACING DRIVEWAY PAVEMENT

On all concrete driveway pavements, the replacement shall consist of a reinforced Class "A" concrete slab with a minimum thickness of six (6) inches. The type of finish for the replaced section shall be the same as that appearing on the old pavement. Reinforcement shall be #4 bars at 12 inches each way with additional diagonal bars as indicated on the drawings. Any other type shall be replaced with like or better replacement. Replacement shall, in general, be to original joint or score mark.

7. REPLACING SIDEWALKS

On all sidewalk pavements, the replacement shall consist of a reinforced Class "A" concrete slab four (4) inches thick. The type of finish for the replaced section shall be the same as that appearing on the old sidewalk. Replacement shall, in general, be to original joint or score marks. Reinforcement shall be 4" x 4" - W2.9 x W2.9 welded wire fabric located at mid-depth in the slab.

8. REPLACING CURB AND GUTTER

On all curb and gutter, the replacement shall consist of a section conforming in all details to the original section or to City of Corpus Christi Standard curb and gutter section, if required by the Engineer. Cuts through the curb shall be replaced with Class "A" concrete. Preserve the original steel reinforcing and reinforce all new curbs with three #4 bars. Adjust grades for positive drainage. Replacement shall, in general, be to original joint or score mark. For jointed concrete roadways, the joints in curb or in curb and gutter should match the concrete roadway joints.
9. REPAIRING STREET SHOULDERS AND UNIMPROVED STREETS

On streets or roads without curb and gutter where a shoulder is disturbed, it shall be restored to like or better condition. The shoulder surface shall be rolled to an acceptably stable condition. The requirements of City Ordinance 030040 as stated above apply also to unimproved streets unless a specific variance is granted by the Director of Development Services.

10. MEASUREMENT AND PAYMENT

Unless otherwise specified on the Bid Form, pavement repair shall be measured by the square yard of the type of repair specified; curb and gutter replacement shall be measured by the linear foot; and sidewalk and driveway replacement shall each be measured by the square foot. Payment will be made at the unit price bid for the completed work and shall be full compensation for all labor, materials, equipment, tools, and incidentals required to complete the work. No separate measurement or payment will be made for subgrade compaction, sand leveling course, geogrid, ordinary backfill, cement-stabilized sand backfill, flexible base, prime coat, hot-mix asphaltic concrete, etc.
