

# So You Decided to Evacuate... Now What?

## *Preparing For The Trip*

Plan on traveling 200 miles (or more) from the storm's eyewall.  
A one hour trip could take 10 during a mandatory evacuation.  
Always #BePrepared

Stay current on your oil changes,  
tire rotations & tune-ups. Check  
fluid levels, tire pressure & belts.  
Consider having a spare tire.

Extra vehicle? Lock up in your garage  
away from tree limbs. Consider  
parking in a parking garage.

Leave early and have at least 2 evacuation plans.  
Have physical copies of everything--your vehicle  
registration, insurance cards, maps, even addresses.

Prepare a box for vehicle emergency supplies.  
Include vehicle fluids, road flares, jumper cables,  
a gas canister, items for flat repairs and tools.
